

CURRICULUM

Correct waste management identifies, as is known, a complex system of operations, the success of which is closely correlated with the professionalism used to achieve the set objectives. For these reasons ESPER (Study Body for Eco-sustainable Waste Planning) was born and operates as a research body which includes professionals who boast many years of experience in the various and complementary disciplines they belong to. All activities are carried out exclusively on behalf of public bodies or companies controlled by public bodies and concern in particular the planning of integrated separate waste collection services as well as the preparatory documents for the start-up of these services (specifications, technical specifications and calls for tenders, service card, area and municipal regulations, communication projects, etc.), support for the implementation of the punctual tariff, the drafting of planning tools (Regional or Area Plans, Strategic Environmental Assessment procedures), the drafting of research and projects in the field of Circular Economy and the reduction of MSW production. The technical structure also takes care of all the activities relating to the Directorate for the execution of urban hygiene contracts (DEC).

The technical-economic analysis developed in the design activity were elaborated to develop the SCSi software patented at European level by ESPER for the detailed design of the integrated urban waste management services. This software was selected by ARPAV of Veneto on behalf of APAT (now ISPRA1) for the simulation of the collection costs for territorial macro areas (ATO, Provinces, Regions, etc.) and allow an accurate and precise definition of the costs of each single fraction of waste and the elaboration of technical-economic and management scenarios such as allow the competent bodies and offices to make decisions with greater awareness in terms of: operational choices, service optimisation, service costs and expected results. ESPER, operating as a technical partner of the Association of Virtuous Municipalities for the waste sector, has drafted and published free of charge the following in-depth volumes of specific environmental issues also identified with the "Associazione Comuni virtuosi":

- "Verso un'Economia realmente Circolare" is available at this link: <https://bit.ly/3sE1R58>
- "20 anni di gestione degli imballaggi: cosa è stato fatto, cosa resta da fare" link: <https://bit.ly/40OP7oK>
- "10 percorsi europei virtuosi verso la tariffazione incentivante" link: <https://bit.ly/47JRFxz>
- "10 percorsi Virtuosi verso Riduzione, Riuso, Riciclo e Tariffazione Incentivante" link: <https://bit.ly/46x9XKp>
- "Plastic free? – Lotta al monouso e corretta gestione della plastica" link: <https://bit.ly/3GvOnf7>

ESPER has also funded the making of two documentaries that anyone can view for free:

- "Sogni comuni" in collaboration with the writer Paolo Rumiz in which citizens and administrators tell their own virtuous experiences (we point out in particular the experience of Modugno which was the first large Municipality in the central south to apply punctual pricing with the technical support of ESPER): link <https://bit.ly/44FabPt>
- "Oltre i luoghi comuni" with the climatologist Luca Mercalli, Italia Libera Editrice and Greeaccord Onlus to disprove some clichés and help discover an Italy that has successfully faced and solved the challenge of virtuous waste management, also through the technical support of ESPER: link <https://bit.ly/3XtK8Im>

ESPER is conducting research activities² on behalf of the Ministry of the Environment in partnership with the National Research Center and ISMN (Institute for the Study of Nanostructured Materials) and IIA (Institute for Atmospheric Pollution). From 1 June 2022 ESPER, pursuant to and by effect of the law of 28 December 2015, n. 208, has amended its statute becoming a Benefit Company, undertaking to allocate at least 10% of its profits each year to pursue a measurable social value, with particular regard to environmental protection, specifically through an ever-increasing diffusion of good practices in the sector the reduction, reuse and recycling of waste through the organization of seminars and conferences, the free publication and dissemination of the related studies, research and newsletters.

¹The description of the software was reported in the volume "Technical-economic analysis of integrated management of RU" published by ISPRA (see link <http://www.isprambiente.gov.it/it/pubblicazioni/rapporti/analisi-tecnico-economica-della-gestione-integrata>)
